About OIFITS

OIFITS is a standard for exchanging calibrated, time-averaged data from astronomical optical interferometers, based on the [FITS Standard](#) (OIFITS is a registered [FITS convention](#)). OIFITS may be used to combine data from multiple interferometer arrays for joint analysis and/or image reconstruction. OIFITS-format files can be prepared from the raw interferometer data without using information about the detailed structure of the target object (i.e. without doing any astrophysical interpretation), yet once the data is in the format, it can be analysed without knowing the details of the instrument. Calibrated data from different interferometers can be treated in the same way (provided there are no residual systematic errors).

defined by Duvert, Young and Hummel, A&A 597, A8 (2017), <https://doi.org/10.1051/0004-6361/201629534>. The standard are published on [arXiv](#).

<https://oival.jmmc.fr>

The screenshot shows the OIFits Validator interface. At the top, it displays the URL <http://oidb.jmmc.fr/get-data.html?id=1652115>. Below this is a table with columns: target_name, s_ra, s_dec, t_exptime, t_min, t_max, em_res_power, em_min, em_max, facility_name, and id. One row is shown for 'alphaboo'. At the bottom of the table, there's a 'Check report' section with a log of analysis results:

```

Analysing File: get-data.html?id=1652115
Analysing table [OI_TARGET#1]
SEVERE TARGET_ID[0] cannot be < 1 at row 0
Analysing table [OI_VIS2#3]
SEVERE Missing OI_ARRAY table that describes the 'IOTA_AB' array
Analysing table [OI_VIS2#4]
SEVERE Missing OI_ARRAY table that describes the 'IOTA_AC' array
Analysing table [OI_VIS2#5]
SEVERE Missing OI_ARRAY table that describes the 'IOTA_BC' array
Analysing table [OI_T#6]
SEVERE Missing OI_ARRAY table that describes the 'IOTA_ABC' array
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 0, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 1, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 2, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 3, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 4, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 5, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 6, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 7, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 8, found '-1.0' should be '>= 0 or NaN or flagged out
SEVERE Invalid value at index 0 for column 'T3AMPERR' line 9, found '-1.0' should be '>= 0 or NaN or flagged out
0 warnings, 6 severe errors

```

Details on failures...

| OIFITS Rules | | | |
|------------------------|---|-----------|------------------------|
| Show / Hide 'Apply To' | | Rules | |
| Name | Description | Paragraph | Standard |
| ARRNAME_REF | check if an OI_ARRAY table matches the ARRNAME keyword | V2.6.1\$3 | VERSION_1 VERSION_2 |
| ARRNAME_UNIQ | check if a single OI_ARRAY table corresponds to the ARRNAME keyword | V2.5.2\$1 | VERSION_1 VERSION_2 |
| CORRNAME_REF | check if an OI_CORR table matches the CORRNAME keyword | V2.6.1\$3 | VERSION_2 |
| CORRNAME_UNIQ | check if a single OI_CORR table corresponds to the CORRNAME keyword | V2.7.2\$4 | VERSION_2 |
| FILE_EXIST | check if the file exist | JMMC | VERSION_1 VERSION_2 |
| FILE_LOAD | check if the OIFITS file is loaded properly (IO error) | JMMC | VERSION_1 VERSION_2 |
| INSNAME_REF | check if an OI_WAVELENGTH table matches the INSNAME keyword | V2.6.1\$3 | VERSION_1 VERSION_2 |
| INSNAME_UNIQ | check if a single OI_WAVELENGTH table corresponds to the INSNAME keyword | V1.6.3.1 | VERSION_1 VERSION_2 |
| GENERIC_COL_DIM | check if the dimension of column values >= 1 | JMMC | VERSION_1 VERSION_2 |
| GENERIC_COL_ERR_FIX | fix the UNFLAGGED *ERR column invalid values (negative values set to NaN) | JMMC | VERSION_1 VERSION_2 |
| GENERIC_COL_FORMAT | check if the column format matches the expected format (data type and dimensions) | V2.4\$1 | VERSION_1 VERSION_2 |

Demo

How to get and run OIFitsExplorer on your machine

- Visit <https://www.jmmc.fr/oifitsexplorer>
- Prerequisites java !
- Main application link run the JavaWebStart version (auto-updated)
- Visit the release page to get access to the beta version and the alternative software package as jar file
- Try its command line interface for batch

Final words

Developments restarted this year and should be active in the coming months – documentation update should be released

Explore, Filter & Export/merge your OIFits files

Please report any problem or question to the JMMC User Support

www.jmmc.fr/support

Feedback always appreciated and useful !
